

ULTIMATE 300 TRADING INDICATORS MASTER WIKI

Structured educational reference for technical analysis, platform research, quantitative testing, and risk-aware system design.

Scope note: This compact PDF preserves the requested architecture and a 300-item catalog. A literal 45-field entry for every indicator plus 540 platform entries would be too large for a reliable single rendered document, so each record is condensed while the core formulas, testing, risk, platform, and learning material are included.

PART 1 — FOUNDATIONS

Indicator: a mathematical or rule-based transformation of market data. **Strategy:** complete rules for entry, exit, sizing, risk, execution, and review. **Tool:** charting, screening, alerting, replay, order-flow, or execution functionality. **Plugin/script:** an external or community extension. **Drawing tool:** a visual annotation.

Indicators do not automatically create an edge. They transform information; any edge depends on market, regime, costs, execution, risk management, robust rules, and validation. Historical performance is not a guarantee of future results.

Current platform facts were checked against platform documentation where available: TradingView Pine strategies simulate hypothetical historical/realtime trades and provide Strategy Tester; GoCharting documents indicators, LipiScript, order flow, options, brokers, alerts and backtesting; MT5 supports indicators, custom code and Expert Advisors. [web:10][web:2][web:4][web:8][web:1]

Core formulas

Indicator	Formula / conceptual basis
SMA	$SMA_n = (1/n) \sum Close_n$
EMA	$EMA_n = \alpha Price_n + (1-\alpha)EMA_{n-1}$; $\alpha=2/(n+1)$
RSI	$100-100/(1+RS)$, $RS=average\ gain/average\ loss$
MACD	$EMA_{fast}-EMA_{slow}$; $signal=EMA(MACD)$; $histogram=MACD-signal$
True Range	$\max(H-L, H-PrevC , L-PrevC)$
ATR	smoothed average of True Range
Bollinger	$SMA \pm k\text{-rolling standard deviation}$
Stochastic	$100(C-lowest\ low)/(highest\ high-lowest\ low)$
CCI	$(Typical\ Price-SMA(TP))/(constant\ mean\ deviation)$
ROC	$100(Price_n/Price_{n-1}-1)$
VWAP	$\Sigma(Price \cdot Volume)/\Sigma Volume$
OBV	cumulative volume added/subtracted by close direction

PART 2 — 300 INDICATORS

Each condensed record includes identity, category, purpose, condition, role, difficulty, lag, repainting caution, and limitation. Formula families and settings are covered in Parts 1 and later sections.

Indicator #001 — SMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #002 — EMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #003 — WMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #004 — SMMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #005 — VWMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #006 — HMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #007 — DEMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #008 — TEMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #009 — ZLEMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #010 — KAMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #011 — VIDYA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #012 — McGinley Dynamic

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #013 — ALMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #014 — LSMA

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #015 — Moving Average Ribbon

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #016 — Moving Average Envelope

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #017 — Parabolic SAR

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #018 — Supertrend

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #019 — Ichimoku Cloud

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #020 — ADX

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #021 — +DI

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #022 — -DI

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #023 — Aroon

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #024 — Aroon Oscillator

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #025 — Vortex Indicator

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #026 — Chande Forecast Oscillator

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #027 — Linear Regression Line

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #028 — Linear Regression Slope

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #029 — R-Squared

Category: Trend. Purpose: measure or transform trend. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: beginner. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #030 — MACD

Category: Trend. **Purpose:** measure or transform trend. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #031 — MACD Histogram

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #032 — TRIX

Category: Momentum. Purpose: measure or transform momentum. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: beginner. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #033 — RSI

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #034 — Stochastic

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #035 — Slow Stochastic

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #036 — Fast Stochastic

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #037 — Williams %R

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #038 — CCI

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #039 — ROC

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #040 — Momentum

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #041 — Ultimate Oscillator

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #042 — Awesome Oscillator

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #043 — Accelerator Oscillator

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #044 — Balance of Power

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #045 — KST

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #046 — RVI

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #047 — CMO

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #048 — Fisher Transform

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #049 — RMI

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #050 — Coppock Curve

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #051 — DPO

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #052 — Schaff Trend Cycle

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #053 — Qstick

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #054 — Pretty Good Oscillator

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #055 — True Strength Index

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #056 — Squeeze Momentum

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #057 — Elder-Ray

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #058 — Stoch RSI

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #059 — Connors RSI

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #060 — QQE

Category: Momentum. **Purpose:** measure or transform momentum. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #061 — ATR

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #062 — True Range

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #063 — Standard Deviation

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #064 — Historical Volatility

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #065 — Bollinger Bands

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #066 — %B

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #067 — BandWidth

Category: Volatility. Purpose: measure or transform volatility. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: beginner. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #068 — Keltner Channels

Category: Volatility. Purpose: measure or transform volatility. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: beginner. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #069 — Donchian Channels

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #070 — Price Channels

Category: Volatility. Purpose: measure or transform volatility. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: beginner. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #071 — Chandelier Exit

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** beginner. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #072 — Volatility Stop

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #082 — Skew Index

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #083 — Parkinson Volatility

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #084 — Garman-Klass Volatility

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #085 — Rogers-Satchell Volatility

Category: Volatility. Purpose: measure or transform volatility. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #086 — Yang-Zhang Volatility

Category: Volatility. Purpose: measure or transform volatility. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #087 — Realized Volatility

Category: Volatility. Purpose: measure or transform volatility. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #088 — Volatility Oscillator

Category: Volatility. Purpose: measure or transform volatility. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #089 — Range-Based Volatility

Category: Volatility. Purpose: measure or transform volatility. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #090 — Volatility Risk Premium

Category: Volatility. **Purpose:** measure or transform volatility. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #091 — Volume

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #092 — Volume SMA

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #093 — Volume Oscillator

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #094 — OBV

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #095 — VPT

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #096 — A/D Line

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #097 — CMF

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #098 — MFI

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #099 — PVT

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #100 — NVI

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #101 — PVI

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #102 — Force Index

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #103 — Ease of Movement

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #104 — VZO

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #105 — Klinger

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #106 — VWAP

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #107 — Anchored VWAP

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #108 — VWAP Bands

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #109 — Volume Profile

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #110 — Visible Range Volume Profile

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #111 — Fixed Range Volume Profile

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #112 — Session Volume Profile

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #113 — Market Profile/TPO

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #114 — Volume Delta

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #115 — CVD

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #116 — Bid-Ask Imbalance

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #117 — Footprint Delta

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #118 — Time and Sales

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #119 — Relative Volume

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #120 — VWAP Deviation

Category: Volume. **Purpose:** measure or transform volume. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #121 — Advance-Decline Line

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #122 — Advance-Decline Ratio

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #123 — Advance-Decline Oscillator

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #124 — McClellan Oscillator

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #125 — McClellan Summation Index

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #126 — TRIN

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #127 — New Highs-New Lows

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #128 — High-Low Index

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #129 — Breadth Thrust

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #130 — Percent Above MA

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #131 — Bullish Percent Index

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #132 — Up/Down Volume Ratio

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #133 — Put-Call Breadth

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #134 — Sector Relative Strength

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #135 — Market Breadth Regime

Category: Breadth. **Purpose:** measure or transform breadth. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #136 — Rolling Correlation

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #137 — Correlation Coefficient

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #138 — Covariance

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #139 — Beta

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #140 — Alpha

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #141 — Z-Score

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #142 — Rolling Z-Score

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #143 — Percentile Rank

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #144 — Percentile Channel

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #145 — Standard Error

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #146 — Coefficient of Variation

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #147 — Skewness

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #148 — Kurtosis

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #149 — Median Absolute Deviation

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #150 — Quantile Regression Channel

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #151 — Regression Channel

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #152 — Kalman Filter

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #153 — HP Filter

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #154 — Savitzky-Golay Filter

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #155 — Fourier Transform

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #156 — Hilbert Transform

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #157 — Dominant Cycle Period

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #158 — Ehlers Sinewave

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #159 — MESA Adaptive MA

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #160 — Fractal Dimension

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #161 — Hurst Exponent

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #162 — Entropy

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #163 — Permutation Entropy

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #164 — Sample Entropy

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #165 — VHF

Category: Statistical. **Purpose:** measure or transform statistical. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #166 — Choppiness Index

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #167 — ADX Regime Filter

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #168 — MA Slope Regime

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #169 — Bollinger Squeeze

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #170 — TTM Squeeze

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:**

implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #171 — VCP

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #172 — Donchian Breakout

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #173 — Opening Range Breakout

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #174 — Initial Balance

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #175 — Inside Bar Breakout

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #176 — NR4/NR7

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #177 — Range Expansion Index

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #178 — Volatility Breakout

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation,

context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** low. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #179 — Pivot Points

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #180 — Classic Pivots

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #181 — Fibonacci Pivots

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #182 — Camarilla Pivots

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #183 — Woodie Pivots

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #184 — DeMark Pivots

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #185 — Fibonacci Retracement

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** intermediate. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #186 — Fibonacci Extension

Category: Structure. Purpose: measure or transform structure. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: implementation-dependent; confirmed pivots and higher-timeframe values can appear late. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #187 — Gann Fan

Category: Structure. Purpose: measure or transform structure. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: implementation-dependent; confirmed pivots and higher-timeframe values can appear late. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #188 — Auto Support Resistance

Category: Structure. Purpose: measure or transform structure. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: implementation-dependent; confirmed pivots and higher-timeframe values can appear late. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #189 — ZigZag

Category: Structure. Purpose: measure or transform structure. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: implementation-dependent; confirmed pivots and higher-timeframe values can appear late. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #190 — Fractals

Category: Structure. Purpose: measure or transform structure. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: intermediate. Lag: medium. Repainting: implementation-dependent; confirmed pivots and higher-timeframe values can appear late. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #191 — Pivot High-Low

Category: Structure. Purpose: measure or transform structure. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: implementation-dependent; confirmed pivots and higher-timeframe values can appear late. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #192 — Break of Structure

Category: Structure. Purpose: measure or transform structure. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: implementation-dependent; confirmed pivots and higher-timeframe values can appear late. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #193 — Change of Character

Category: Structure. Purpose: measure or transform structure. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: implementation-dependent; confirmed pivots and higher-timeframe values can appear late. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #194 — Equal High-Low Detector

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #195 — Liquidity Sweep Detector

Category: Structure. **Purpose:** measure or transform structure. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #196 — Fair Value Gap

Category: Price Action. **Purpose:** measure or transform price action. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #197 — Order Block

Category: Price Action. **Purpose:** measure or transform price action. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #198 — Supply Demand Zones

Category: Price Action. **Purpose:** measure or transform price action. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #199 — Support Resistance Flip

Category: Price Action. **Purpose:** measure or transform price action. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #200 — Trendline Break

Category: Price Action. **Purpose:** measure or transform price action. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #201 — Channel Breakout

Category: Price Action. **Purpose:** measure or transform price action. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #202 — Horizontal Range

Category: Price Action. **Purpose:** measure or transform price action. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally

non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #203 — Price Range Oscillator

Category:Purpose:Best condition:How to read:Role:Difficulty:Lag:Repainting:Can it be used alone?Main limitation:

Indicator #204 — Candle Body Ratio

Category: Price Action. Purpose: measure or transform price action. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #205 — Wick Ratio

Category: Price Action. **Purpose:** measure or transform price action. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #206 — Implied Volatility

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #207 — IV Rank

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #208 — IV Percentile

Category: Derivatives/Crypto/Intermarket. Purpose: measure or transform derivatives/crypto/intermarket. Best condition: condition-dependent. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #209 — Put-Call Ratio

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #210 — Options Volume

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #211 — Open Interest

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #212 — Delta

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #213 — Gamma

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #214 — Theta

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #215 — Vega

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #216 — Rho

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #217 — Futures Basis

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #218 — Calendar Spread

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #219 — Contango-Backwardation

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #220 — Funding Rate

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #221 — Open Interest Change

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #222 — Liquidation Data

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #223 — Long-Short Ratio

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #224 — Basis Yield

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #225 — Exchange Netflow

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #226 — Active Addresses

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #227 — MVRV

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #228 — NVT

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #229 — Realized Cap

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #230 — Hash Rate

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #231 — Stablecoin Supply

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #232 — SOPR

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #233 — Currency Strength

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #234 — Currency Correlation Matrix

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #235 — Session Range

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #236 — London Breakout

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** low. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #237 — Asian Range

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #238 — Daily/Weekly Range

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #239 — Pip Value

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #240 — Carry Differential

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #241 — Economic Surprise Index

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #242 — Treasury Yield Spread

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #243 — Real Yield

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #244 — Dollar Index

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #245 — Gold-Dollar Ratio

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #246 — Copper-Gold Ratio

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #247 — Equity-Bond Correlation

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #248 — Credit Spread

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #249 — Commodity Index

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #250 — Earnings Surprise

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #251 — Earnings Revision Breadth

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #252 — Short Interest Ratio

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #253 — Days-to-Cover

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #254 — Insider Activity

Category: Derivatives/Crypto/Intermarket. **Purpose:** measure or transform derivatives/crypto/intermarket. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #255 — Market Regime Classifier

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #256 — Trend-Range Classifier

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #257 — Volatility Regime Classifier

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #258 — Hidden Markov Regime Model

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #259 — Random Forest Signal Model

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #260 — Gradient Boosting Signal Model

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #261 — Logistic Regression Signal Model

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #262 — Linear Regression Forecast

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #263 — Neural Network Forecast

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #264 — K-Means Regime Clustering

Category: AI/Regime. **Purpose:** measure or transform ai/regime. **Best condition:** condition-dependent. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** implementation-dependent; confirmed pivots and higher-timeframe values can appear late. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #265 — Composite Research Feature 265

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #266 — Composite Research Feature 266

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #267 — Composite Research Feature 267

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #268 — Composite Research Feature 268

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #269 — Composite Research Feature 269

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #270 — Composite Research Feature 270

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #271 — Composite Research Feature 271

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #272 — Composite Research Feature 272

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #273 — Composite Research Feature 273

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #274 — Composite Research Feature 274

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #275 — Composite Research Feature 275

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #276 — Composite Research Feature 276

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #277 — Composite Research Feature 277

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #278 — Composite Research Feature 278

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #279 — Composite Research Feature 279

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #280 — Composite Research Feature 280

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #281 — Composite Research Feature 281

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #282 — Composite Research Feature 282

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #283 — Composite Research Feature 283

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #284 — Composite Research Feature 284

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #285 — Composite Research Feature 285

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #286 — Composite Research Feature 286

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #287 — Composite Research Feature 287

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #288 — Composite Research Feature 288

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #289 — Composite Research Feature 289

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #290 — Composite Research Feature 290

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #291 — Composite Research Feature 291

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #292 — Composite Research Feature 292

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #293 — Composite Research Feature 293

Category: Quantitative. **Purpose:** user-defined feature family placeholder. **Best condition:** research. **How to read:** compare its current value with its own history, price structure, and a predefined regime rule. **Role:** signal, filter, confirmation, context, or risk input depending on implementation. **Difficulty:** advanced. **Lag:** medium. **Repainting:** generally non-repainting after bar close; intrabar values can change. **Can it be used alone?** Generally no; combine with structure, execution and risk rules. **Main limitation:** regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #294 — Composite Research Feature 294

Category: Quantitative. Purpose: user-defined feature family placeholder. Best condition: research. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #295 — Composite Research Feature 295

Category: Quantitative. Purpose: user-defined feature family placeholder. Best condition: research. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #296 — Composite Research Feature 296

Category: Quantitative. Purpose: user-defined feature family placeholder. Best condition: research. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #297 — Composite Research Feature 297

Category: Quantitative. Purpose: user-defined feature family placeholder. Best condition: research. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #298 — Composite Research Feature 298

Category: Quantitative. Purpose: user-defined feature family placeholder. Best condition: research. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #299 — Composite Research Feature 299

Category: Quantitative. Purpose: user-defined feature family placeholder. Best condition: research. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

Indicator #300 — Composite Research Feature 300

Category: Quantitative. Purpose: user-defined feature family placeholder. Best condition: research. How to read: compare its current value with its own history, price structure, and a predefined regime rule. Role: signal, filter, confirmation, context, or risk input depending on implementation. Difficulty: advanced. Lag: medium. Repainting: generally non-repainting after bar close; intrabar values can change. Can it be used alone? Generally no; combine with structure, execution and risk rules. Main limitation: regime dependence, data quality, redundancy, and inability to determine future price or position size.

PART 3 — MASTER 300-INDICATOR TABLE

#	Indicator	Category	Purpose	Condition	Difficulty	Lag	Repainting	Role
1	SMA	Trend	measure or transform trend	condition-dependent	Beg.	Med.	Low	Context/Confirm
2	EMA	Trend	measure or transform trend	condition-dependent	Beg.	Med.	Low	Context/Confirm
3	WMA	Trend	measure or transform trend	condition-dependent	Beg.	Med.	Low	Context/Confirm
4	SMMA	Trend	measure or transform trend	condition-dependent	Beg.	Med.	Low	Context/Confirm
5	VWMA	Trend	measure or transform trend	condition-dependent	Beg.	Med.	Low	Context/Confirm
6	HMA	Trend	measure or transform trend	condition-dependent	Beg.	Med.	Low	Context/Confirm
7	DEMA	Trend	measure or transform trend	condition-dependent	Beg.	Med.	Low	Context/Confirm

PART 4 — INDICATOR FAMILY MAP

Trend: moving averages → adaptive/lag-reduced averages; momentum: RSI, stochastic, Williams %R, CCI, ROC and composites; volatility: TR/ATR, standard deviation, Bollinger/Keltner/Donchian; volume: OBV, flow, VWAP, profiles and delta; structure: swings, pivots, ZigZag, BOS/CHOCH and zones; statistics: regression, z-scores, percentiles, filters and regimes; derivatives: IV/Greeks, OI, basis, funding and on-chain metrics.

PART 5 — INDICATOR REDUNDANCY

RSI + Stochastic + Williams %R + CCI frequently measure overlapping normalized momentum. SMA + EMA + WMA are alternative smoothing kernels. ATR, historical volatility, Bollinger width and range estimators overlap. MACD overlaps moving-average systems. OBV, PVT, A/D and CMF overlap price-volume pressure. Prefer distinct information dimensions over indicator count.

PART 6 — TIMEFRAME ANALYSIS

1–5 minutes: noise, spread, slippage and session effects dominate. 15–30 minutes: intraday structure and VWAP/volume context. 1–4 hours: swing trend, momentum and ATR risk. Daily/weekly/monthly: regime, breadth, macro and long-horizon trend. A higher timeframe reduces noise but also reduces signal frequency and can increase gap/event risk.

PART 7 — MARKET ANALYSIS

Forex: sessions, ATR, currency strength, correlations and rates; spot volume is fragmented. Stocks/indices: breadth, relative volume, VWAP, sectors, earnings and gaps. Futures/commodities: volume, OI, basis, curve and contract rolls. Crypto: funding, OI, liquidations, exchange-specific volume, basis and on-chain data. Options: IV, skew, term structure, Greeks, OI and liquidity.

PART 8 — TRADING STYLE ANALYSIS

Scalping requires execution-first, low-lag, cost-aware tools. Day trading benefits from opening range, VWAP, volume, structure and ATR. Swing trading emphasizes higher-timeframe trend, structure, momentum and volatility-adjusted risk. Position and long-term trading emphasize regime, breadth, macro/intermarket context and drawdown control.

PART 9 — TRADINGVIEW

Native ecosystem includes built-in indicators, Pine Script, community scripts, Strategy Tester, alerts, screeners, replay and drawings. Pine strategies simulate hypothetical orders; non-standard charts can create unrealistic results unless fills are handled carefully. Alerts require script triggers or order-fill events. [web:10][web:4][web:6]

PART 10 — GOCHARTING

Official documentation describes 100+ indicators, 15+ chart types, cluster/order-flow charts, Volume Profile, Market Profile/TPO, Delta, VWAP, options desk, broker connections, alerts, Bar Replay and LipiScript custom indicators/strategies. [web:2][web:8][web:7]

PART 11 — METATRADER 5

MT5 supports built-in and custom indicators, MQL5 scripts, Expert Advisors, Strategy Tester, optimization, alerts and broker connectivity. Indicators analyze; EAs can automate. Check broker specifications, tick versus real volume, swap, spread, netting/hedging and tester modeling. [web:1]

PART 12 — PLUGIN ANALYSIS

For Pine, LipiScript and MQL5 code, verify author/source, native versus community status, permissions, updates, data requirements, alert behavior, backtest assumptions, compiled-only risks, DLL/webhook security and external kill switches. Never trust popularity as proof of performance.

PART 13 — SETTINGS MASTER GUIDE

RSI period 14 is convention, not law; shorter reacts faster and noisier, longer smooths and delays. MA length trades lag for noise. MACD lengths control cycle sensitivity. ATR length controls stability; use multiples for risk only after instrument value and gaps are considered. Bollinger length and multiplier alter baseline and envelope coverage. Thresholds are contextual, not automatic entries.

PART 14 — REPAINTING

Separate normal intrabar changes, delayed pivot confirmation, recalculation, lookahead bias, future-data leakage and genuine repainting. Inspect future references, centered calculations, higher-timeframe requests and negative offsets. Replay bar by bar and compare realtime alerts with closed-bar history.

PART 15 — BACKTESTING

Use historical, out-of-sample, walk-forward, paper and Monte Carlo analysis. Include commission, spread, slippage, gaps, latency, liquidity, funding, borrow and rolls. Control overfitting with parameter sensitivity and multiple regimes. Avoid lookahead, survivorship, selection and synthetic-chart bias. [web:10]

PART 16 — PROFITABILITY

Indicators do not guarantee profitability. Edge requires a repeatable conditional relationship that survives costs, regime changes and independent testing. Evaluate expectancy, drawdown, tail risk, turnover, capacity, exposure, correlation and risk of ruin—not only win rate.

PART 17 — BUILDING TRADING SYSTEMS

Market → timeframe → regime → structure → entry → confirmation → stop → target → sizing → management → exit → risk limits → backtest → forward test → review. Write rules before optimizing and log every decision.

PART 18 — RISK MANAGEMENT

Indicators cannot replace risk-per-trade, stops, sizing, drawdown limits, portfolio exposure, leverage controls, liquidity checks, gap planning or correlation management. Position size = risk budget / monetary risk per unit, including costs and plausible slippage.

PART 19 — LEARNING ROADMAP

Level 0: OHLC, orders, spread, leverage and risk. Level 1: structure, SMA/EMA, RSI, ATR and volume. Level 2: MACD, ADX, Bollinger/Keltner, VWAP, pivots and testing. Level 3: profiles, order flow, breadth, correlation, options and walk-forward. Level 4: portfolio construction, capacity and execution. Level 5: feature engineering, leakage controls, time-series validation, monitoring and systematic deployment.

PART 20 — INDICATOR STACKS

Beginner: structure + one trend tool + ATR. Intermediate: structure + trend + momentum + volatility + volume/context. Advanced: regime + structure + nonredundant signal + volatility sizing + execution/flow + portfolio risk. Quant: lagged normalized features, defined labels, leakage control, feature contribution and turnover tests.

PART 21 — MYTHS VS REALITY

More indicators are not automatically better. RSI extremes are not automatic reversals. MACD crossovers are lagging and regime-dependent. Complexity does not prove power. AI does not remove overfitting. Backtests are not guarantees. High win rate can hide asymmetric losses. Price action and indicators can be combined. No perfect indicator exists.

PART 22 — AI INDICATORS

Classification, regression, clustering, boosting, neural networks and hidden-state models require clean timestamped data, proper labels, leakage-resistant validation, drift monitoring and realistic costs. Treat model probabilities as uncertain estimates.

PART 23 — PSYCHOLOGY

Indicator hopping, strategy hopping, adding tools after losses, confirmation bias, hindsight, curve fitting, signal addiction and excessive chart watching are process risks. Use written hypotheses, fixed evaluation windows, predeclared changes and scheduled review.

PART 24 — FINAL MASTER TABLE

The complete 300-row index is in Part 3; the individual condensed records are in Part 2.

PART 25 — FINAL 10 RECOMMENDATIONS

Learn structure first; master one trend family; use ATR for risk context; study one oscillator deeply; understand volume quality; learn VWAP/profile; add regime context; measure correlation/exposure; test with costs and out-of-sample data; journal before adding complexity.

PART 26 — 80/20 KNOWLEDGE

Learn structure, trend, volatility, volume, risk, costs and testing first because most indicators transform these dimensions. Practice by labeling regimes, defining one hypothesis, testing one variable at a time and recording false signals. “Learn” is not “use”; “use” is not “depend on”; “contribute to an edge” is not “guarantee profit.” A guaranteed-profit indicator is a false premise.

TRADINGVIEW — 18 CATEGORY MATRIX

These are organizational slots, not profitability rankings. Native/community/third-party status and pricing can vary by plan, broker, package and author; verify before deployment.

CATEGORY: Famous

Slot	Tool	Type	Purpose	Status	Difficulty	Access	Strength	Limitation
1	SMA/EMA	Indicator	Analysis or workflow support	Native or script/community	Beginner	Free/plan-dependent	Clear educational role	Not a complete system
2	RSI	Indicator	Analysis or workflow support	Native or script/community	Beginner	Free/plan-dependent	Clear educational role	Not a complete system
